Security & Safety Film Installation Guide

Security & Safety Film Installation Guide

1. Preparation:

   - Clean the glass surface thoroughly.

   - Measure and cut the film slightly larger than the window.

   - Ensure a dust-free environment for installation.

2. Application:

   - Wet the window with a soap and water solution.

   - Remove the film backing and spray the adhesive side with solution.

   - Position the film carefully and press it against the glass.

   - Use a squeegee to remove excess water and air bubbles.

   - Trim excess film along the edges.

3. Drying Time:

   - Allow 72 hours for full adhesion.

   - Avoid touching or cleaning the film surface during this period.

4. Additional Security Measures:

   - Ensure proper edge sealing for maximum strength.

   - Regularly inspect the film for signs of wear.

For high-security applications, professional installation is recommended.
